

# JACK AND ROLL

## STEEL SKATE

## HYDRAULIC JACK

What is Jack and Roll?

When items cannot be accessed by a crane, we bring in our jack and roll team. This means we can move the piece outside of a building in order to load it or vice versa. Our jack and roll team has specialized tools including custom hydraulic jacks and machine skates in order to roll the item safely to its intended location. Most importantly, our crew has extensive experience in moving all sorts of equipment.

Our large articulators and straight booms often work closely with our jack and roll crews to ensure these pieces of equipment get to where they need to go, safely and efficiently.

### OFTEN USED FOR:

- Moving heavy machinery and engines in/out of inaccessible locations by crane or overhead lifts.
- Installing equipment into sub-ground locations (down hallways, ramps, etc.)
- Re-positioning equipment in tandem with an articulating or straight boom picker truck

**56,000 LBS MOTOR**

**MACHINE UNIT**
